Sequence 49, Application US/11221902
Publication No. US20060088522A1
GENERAL INFORMATION:
APPLICANT: Wyeth
TITLE OF INVENTION: HUMANIZED ANTI-5T4 ANTIBODIES AND ANTI-5T4/CALICHEAMICIN CONJUGAT
FILE REFERENCE: 04000-0317285
CURRENT APPLICATION NUMBER: US/11/221,902
CURRENT PILING DATE: 2005-09-09
NUMBER OF SEQ ID NOS: 89
SOFTWARE: PATCHIN Version 3.3
SEQ ID NO 49
LENGTH: 30
TYPE: PRT
ORGANISM: Artificial
FEATURE:
OTHER INFORMATION: consensus antibody heavy chain framework 1 sequence based on
CTHER INFORMATION: human antibody sequences

                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 15,

Sequence 3242, Application US/60815559

Sequence 3242, Application US/60815559

GENERAL INFORMATION:

APPLICANT: Ruben et al.

TITLE OF INVEXTION: Antibodies that Immunospecifically Bind to B Lymphocyte Stimulate

FILE REFERENCE: PF523PP13

CURRENT APPLICATION NUMBER: US/60/815,559

CURRENT APPLICATION DATE: 2006-06-22

NUMBER OF SEQ ID NOS: 3247

SEQ ID NO 3242

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The invention describes an antibody comprising a ligand mimetic, which specifically binds to an activated alphavbeta 3 integrin receptor differentially produced on a cell in a metestatic state compared to a similar, non-metastatic cell, and does not bind to a non-activated alphavbeta 3 integrin receptor. Also described are: a pharmaceutical composition comprising the antibody; treating a disease state in a mammal composition comprising a tumor cell variant with a metastratic homing propensity to a target tissue; producing an antibody phage population having affinity for a tumor cell target; detecting tumor cells in a mammal by treatment with a cancer therapeutic; inducing or enhancing an immune response to an antigen in a mammal; detecting an activated cell surface receptor on a metastatic tumor cell surface in a mammalian tissue sample; interfering with cells liable to undergo metastasis associated with a disease state; identifying cells liable to undergo metastasis associated with a disease state; an isolated Bc-12 or Bc-15 polynucleotide comprising a nucleotide sequence that has at least 90% or 73 present identity to a fully defined 802 or 752 by sequence (SEQ ID NO.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              percent in the specification; an isolated polypeptide comprising a nucleotide sequence that has at least 90% sequence identity to SEQ ID NO. 10 r3, or shares a biological function with Bc-12 or Bc-15; a vector comprising the polymucleotide; an expression vector comprising the polymucleotide; an expression vector comprising the polymucleotide in which the nucleotide sequence of the polymucleotide is operatively linked with a regulatory sequence that controls expression of the polymucleotide or progeny of the cell; and determining anti-metastatic activity of a test compound in a mammal. The antibody is useful for treating neoplastic disease, solid tumor, hematological malignancy, leavening and colorectal cancer, benign or malignant breast cancer, uterine
      specifically binds to activated alphavbeta3 integrin receptor, useful for treating, e.g. neoplastic disease, solid tumor, leukemia, or benign or malignant breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cancer, uterine leiomyomas, ovarian cancer, endometrial cancer, polycystic ovary syndrome, endometrial polyps, prostate cancer, prostatic phypetrophy, pituitary cancer, adenomyosis, adenocarcinomas, meningioma, melanoma, bone cancer, multiple myeloma, CNS cancer, glioma, or astroblastoma. This is the amino acid sequence of single chain variable fragment antibody BC-12.

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLVS) polygeptides. BLVS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antitheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLVS. The antibodies bind to BLVS and so may be used to detect and quantitate the presence of BLVS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLVS. They may also be administered to treat diseases associated with aberrant BLVS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus errythematosus, rheumatoid architis, immunodeficiency (e.g. common variable immunodeficiency (VID) and BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; mamunosuppressive; immunostimulati, immunomodulatory; antirheumatic; antiAlDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome. acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method of Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders. Specifically, it refers to single chain antibody molecules (scPvs) derived, preferably, from the variable chary (DR3 region that immunospecifically bind to a polypeptide, or fragment thereof, of either human, murine, rat or monkey BLvS. The present invention refers to the use of such antibodies in various methods of or the detection, diagnosis and prognosis of diseases related to the aberrant expression or inappropriate function of BLvS or its receptor. As such, these compositions are useful for identifying immune disorders cut of including myastrhania and rheumatoid arthritis, infectious diseases such as AIDS and proliferative disorders including leukaemia, carcinoma and composition and rheumatoid arthritis, infectious diseases such as AIDS and proliferative disorders including leukaemia, carcinoma and cotivities such as antirheumatic, antiallergic and cytostatic. This cutivities such as antirheumatic, antiallergic and cytostatic. This cinvention. NoTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format cutive the printed specification, but was obtained in electronic format.

The Inventor Lighter to an antibody time through the prostate-specific antigen (PGA) and anti-chymotrypain (ACT), and has an affinity for the complex which is at least 10 fold higher than the affinity for the complex which is at least 10 fold higher than the cassays to detect PSA or ACT alone. The antibody is used in disposstic assays to detect PSA-ACT is nerum samples from patients. The levels of PSA-ACT complex increase in patients suffering from prostate cancer compared to the levels in patients with benign or no growths in the prostate. Therefore detection of PSA in complex with ACT is useful for the early detection of prostate tumours, by distinguishing between benign of manigrant conditions of the prostate as well as for the management of patients with prostate cancer; such as the disclosure of metastasis and the monitoring of the PSA levels after treatment. The antibodies may also burification of PSA-ACT unlike prior art antibodies which bind to PSA-CT complexes but may also bind PSA or ACT alone, the present antibodies are specific for PSA-ACT alone. Disgnostic assays using the antibodies are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      э,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to novel antibody sequences, which acts against lesioned tissue. Also claimed is a method (M1) for isolating polynucleotide encoding the antibodies, which involves (a) isolating B cells that is infiltrated into lesioned tissue, and (b) acquiring B polynucleotide that encodes an antibody from the isolated B cells. The antibodies are useful for treating cancer lesions, arteriosclerosis, inflammatory disease or autonimmune disease. The present sequence was used

                                                                                                                                                                                                                                            The present invention relates to a recombinant antibody capable of specifically binding to sperm agglutination antigen-1 (SAGA-1). The recombinant antibody has two peptide fragments of the S19 antibody and the fragments are joined together by a linker. The recombinant monoclonal antibodies are useful in a passive immunity composition for contraception as they inhibit the ability of sperm to fertilize an egg. The antibodies may be used e.g. as an active ingredient of a spermistatic agent, or as a component of a spermicidal contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               118

The invention relates to a method of modulating insulin activity in mammalian cells by administering a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed from gene therapy vectors, that binds to Site 1 of IR and an insulin agonist are useful for treating diabetes. Also, peptides that are antagonists of the insulin-like growth factor-1 (IGF-1) receptor are useful for treating insulin-like growth factor (IGF) sensitive tumours (e.g. of prostate and breast) and diabetic retinopathy, while IGF-1 receptor agonists are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful in screening for compounds that bind to IR or IGF-1 receptor, potential therapeutics and research reagants. AAU880034-AAU99957 represent IR and/or IGF-1 receptor-binding peptides and related amino acid sequences of the diabetes and tumors, comprises using peptides that bind to insulin or insulin-like growth factor receptors. invention

variants like Anti-Mpl antibodies including antihuman Mpl antibody and variants J genetically-engineered antihuman Mpl diabody, applicable in drug compositions for use in chemcherapy of thrombocytopenia and other diseases associated with Mpl mutation.

Claim 29; SEQ ID NO 293; 106pp; Japanese.

The invention describes an antibody is a single-chain polypeptide with TPO (thrombopoietin) receptor (Mpl)-binding activity that contains the 2 TPO (thrombopoietin) receptor (Mpl)-binding activity that contains the 2 CE heavy-chain variable regions and 2 light-chain variable regions. Also described are: a chimeric antibody for binding with Mpl; an antibody for binding with Mpl; an antibody for binding with Mpl; antibody for binding with Mpl; antibodies with binding activity for soluble Mpl; antibodies with binding activity for soluble Mpl; antibodies containing a tight-chain variable regions 1, 2 and 3; antibodies containing heavy and light-chain variable regions with CDR (complementary-determinant regions 1, 2 and 3; antibodies containing a heavy-chain variable region with RDR 1, and 3 selected from the already-specified groups in 18 combinations; antibodies containing a heavy-chain variable region with RDR 1, 2, 3 and 4; antibodies containing a light-chain variable region FR1, 2, 3 and 4; epitope-recognizing antibodies the antibodies with the heavy and light-chain variable and amino acid sequences;

have equivalent activity as such antibodies; vectors containing these polynucleotides; host cells carrying such polynucleotides or vectors; and drug compositions containing these antibodies. The antibodies are applicable in drug compositions for use in chemotherapy of thrombocytopenia and other diseases associated with Mp1 mutation such as congenital amegakaryocytic thrombocytopenia. These antibodies can include antihuman Mp1 antibody and variants like genetically-engineered antihuman Mp1 diabody and (humanized) antihuman Mp1 sc(Fv)2. Such antibodies are soluble to enhance binding ability. The diabody and sc(Fv)2 show high agonistic activity against antihuman Mp1 antibody, such activity of which is comparable or superior to that of the natural ligand, human TPO. This is the amino acid sequence of a single chain antibody human FPO. This
antibodies that can recognize the an amino acid moiety in human Mpl from positions 26-271, polymucleotides encoding these antibodies; polymucleotides hybridizable with the polymucleotides that encode the antibodies under stringent conditions and the antibodies encoded by which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             60 YAQKPQGRVTMTTDTSTSTAYMELRSLRSDDTAVYYCARDPRGDDE---PYWGQGTLVTV 116

The invention relates to remedies for thrombocytopenia comprising an sc(Fv)2 (a double single chain antibody comprising 2 heavy chains and 2 light chains, often referred to as a diabody) with binding activity croward TPO (thrombopoietin) receptor (Mpl, myeloproliferative leukemia toward TPO (thrombopoietin) receptor (Mpl, myeloproliferative leukemia virus encogene) as active ingredient. The antibodies comprise human containing antibodies comprise human containing antibodies for thrombocytopenia containing antibodies for thrombocytopenia containing antibodies (Mpl, remedies for thrombocytopenia containing antibodies (Which have a heavy-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of AEB02046-AEB02046, respectively, and/or a light-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of AEB02046-AEB02046, respectively, and/or a light-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of AEB02046-AEB02046, respectively, and/or a light-chain antibodies having amino acid sequences based on AEB02046-AEB02046, or antibodies having amino acid sequences of AEB02046-AEB02046, or modification by substitution, deletion, addition and/or insertion of some amino acids), remedies for thrombocytopenia containing antibodies that can recognize amino acid sites of human Mpl crompositions 126-274, and agents for increasing platelets containing the emedies. The remedies are for the treatment of thrombocytopenia. Such antibodies are extremely effective because they have high agonistic containing antibody and that of human TPO (thrombopoietin) which is a natural containing antibody derived from the mouse anti-Mpl antibody (WB22B). Note: The sequence data for this patent did nelectronic format directly from WIPO containing antibod, put human pro the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        116

New scFv Bc-12 or Bc-15 antibody comprises ligand mimetic, which specifically binds to activated alphavbeta3 integrin receptor, useful for treating, e.g. neoplastic disease, solid tumor, leukemia, or benign or malignant breast cancer.

Claim 3; SEQ ID NO 4; 109pp; English.

The invention describes an antibody comprising a ligand mimetic, which specifically binds to an activated alphavbeta 3 integrin receptor differentially produced on a cell in a metastatic state compared to a similar, non-metastatic cell, and does not bind to a non-activated alphavbeta 3 integrin receptor. Also described are: a pharmaccutical composition comprising the antibody; treating a disease state in a mammal composition comprising a tumor cell variant with a metastatic homing propensity to a target tissue; producing an antibody phage population having affinity for a tumor cell target; detecting uncorcells in a mammal by treatment with a cancer therapeutic; inducing or enhancing an antigen to a matigen in a mammal; detecting an activated cell surface receptor on a metastatic tumor cell surface in a mammalian tissue sample; interfering with cells liable to undergo metastasis associated with a disease state; identifying cells liable to undergo metastasis associated with a disease state; an isolated Bc-12 or Bc-15 polymucleotide comprising a nucleotide sequence that has at least 90% percent identity to a fully defined 802 or 752 bp sequence (SEQ ID NO. 1 or 3), or shares a biological function with Bc-12 or Bc-15; a vector comprising the polymucleotide in which the nucleotide sequence of the polymucleotide in which the mucleotide sequence that comprising the polymucleotide in which the mucleotide sequence of the polymucleotide in which he mucleotide sequence of the polymucleotide or progeny of the cell; and determining anti-metastatic cativity of a test compound in a mammal. The matibody is useful for activity of a test compound in a mammal The invention describes an antibody comprising a ligand mimetic, which

The invention describes an antibody is a single-chain polypeptide with TPO (thrombopoietin) receptor (Mpl) binding activity that contains the 2 TPO (thrombopoietin) receptor (Mpl) binding activity that contains the 2 Decay Contain variable regions and 2 light-chain variable regions. Also described are: a chimeric antibodies for binding with Mpl; an antibody for binding with Mpl; an antibody for binding with human Mpl and monkey Mpl; antibodies with agonistic activity antibodies containing a heavy-cherminant regions 1, 2 and 3); antibodies containing heavy determinant regions with CDR 12 and 3; antibodies containing a light-chain variable regions with CDR 1, antibodies containing a heavy-chain variable regions with CDR 1, antibodies containing a heavy-chain variable regions with CDR 1, and 4; antibodies containing a heavy-chain variable regions with CDR 1, and 4; antibodies containing a heavy-chain variable regions with RP1, 2, 3 and 4; antibodies containing a neavy-chain variable regions with RP1, 2, 3 and 4; cantibodies that can recognize the antibodies with the chain variable regions and amino acid sequences; antibodies that can recognize the an amino acid sequences; containing these antibodies that can recognize the antibodies; positions 26-274; polymucleotides encoding these antibodies; polymucleotides hybridizable with the polymucleotides with the polymucleotides with the polymucleotides with the polymucleotides of antibodies under stringent conditions and the antibodies encoded by which have equivalent activity as such antibodies; and polymucleotides with the polymucleotides on vectors; and antibodies under stringent conditions and the antibodies recognized and antibodies antibodies and antibodie
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             drug compositions containing these antibodies. The antibodies are applicable in drug compositions for use in chemcherapy of thrombocytopenia and other diseases associated with Mpl mutation such as congenital amegakaryocytic thrombocytopenia. These antibodies can include antihuman Mpl antibody and variants like genetically-engineered antihuman Mpl diabody and (humanized) antihuman Mpl sc(Fv)2. Such antibodies are soluble to enhance binding ability. The diabody and sc(Fv)2 show high agonistic activity against antihuman Mpl antibody, such activity of which is comparable or superior to that of the natural ligand, human TPO. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the amino acid sequence of a single chain antibody hVB22B u2-wz5

(CHUS) CHUGAI SEIYAKU KK

Matsumoto Y; Isuchiya M, Orita T,

WPI; 2005-779430/79. N-PSDB; AEE02144. Remedies for thrombopenia as well as agents for increasing number of platelets comprises e.g. Mpl-recognizing antibodies with high agonistic activity against antihuman Mpl antibody.

Example 3; SEQ ID NO 100; 71pp; Japanese

The invention relates to remedies for thrombocytopenia comprising an sc(Fv)2 (a double single chain antibody comprising 2 heavy chains and 2 light chains, often referred to as a diabody with binding activity to virus concepted to sea a diabody with binding activity of the coward TPO (thrombopoietin) receptor (Mpl, myeloproliferative leukemia virus oncogene) as active ingredient. The antibodies comprise human containing are complementarity region (CDR). Also included are remedies for thrombocytopenia containing antibodies for thrombocytopenia containing antibodies for thrombocytopenia containing antibodies for thrombocytopenia containing antibodies (which have a heavy-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of ABE02046-AEE02046, respectively, and/or a light-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of ABE02046-AEE02046, respectively, and/or a light-chain and/or insertion of some amino acids) remedies for thrombocytopenia containing antibodies that can recognize amino acid sites of human Mpl containing antibodies that can recognize amino acid sites of human Mpl cremedies are for the treatment of thrombocytopenia containing antibodies are for the treatment of thrombocytopenia containing antibodies are for the treatment of thrombocytopenia containing antibodies are for the treatment of thrombocytopenia. activity against antihuman Mpl antibody, and the activity is comparable or superior to that of human TPO (thrombopoietin) which is a natural ligand. The present sequence represents a humanized single chain antibody (or diabody) derived from the mouse anti-Mpl antibody (VB22B). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

polynucleotides; host cells carrying such polynucleotides or vectors; and drug compositions containing these antibodies. The antibodies are applicable in drug compositions for use in chemotherapy of the applicable in the drug compositions are specially of the drug compositions are drug compositions and other diseases associated with Mp1 mutation such as congenital amegakaryocytic thrombocytopenia. These antibodies can include antihuman Mp1 antibody and variants like genetically-engineered antihuman Mp1 diabody and (humanized) antihuman Mp1 sc(Fv)2. Such antibodies are soluble to enhance binding ability. The diabody and sc(Fv)2 show high agonistic activity against antihuman Mp1 antibody, such activity of which is comparable or superior to that of the natural ligand, human TPO. This is the amino acid sequence of a single chain antibody hVB22B p-z.

Sequence 524 AA;

```
The invention describes an antibody is a single-chain polypeptide with TPO (thrombopoietin) receptor (Mp1)-binding activity that contains the 2 meavy-chain variable regions and 2 light-chain variable regions. Also described are: a chimmeric antibody for binding with Mp1; an antibody for binding with human Mp1 and concept with soluble Mp1; antibodies for binding with human Mp1 and monkey Mp1; antibodies with binding activity for soluble Mp1; antibodies cortaining activity for soluble Mp1; antibodies with binding activity for soluble Mp1; antibodies with binding activity for soluble Mp1; antibodies containing a light-chain variable regions with CDR 1 2 and 3); antibodies containing a light-chain variable region with CDR 1; antibodies containing a heavy-chain variable region with CDR 1; antibodies containing a heavy-chain variable region with CDR 1; antibodies containing a heavy-chain variable region with RP1, 2; and 4; antibodies containing a light-chain variable region with RP1, 2; and 4; antibodies containing a light-chain variable region with RP1, 2; and 4; antibodies that can recognize the antibodies with the heavy and light-chain variable regions and amino acid sequences; antibodies that can recognize the antibodies with the polymucleotides encoded by which containing a leavy and light-chain variable regions and amino acid motaety in human Mp1 from positions 26-274; polymucleotides encoding these antibodies that encode the antibodies that encode the antibodies under stringent conditions and the antibodies encoded by which have equivalent activity as such antibodies; vectors containing these

Remedies for thrombopenia as well as agents for increasing number of platelets comprises e.g. Mpl-recognizing antibodies with high agonistic activity against antihuman Mpl antibody.

Example 3; SEQ ID NO 61; 71pp; Japanese.

The invention relates to remedies for thrombocytopenia comprising an sc(FV)2 (a double single chain antibody comprising 2 heavy chains and 2 (Ight chains, often referred to as a diabody) with binding activity toward TPO (thrombopoietin) receptor (Mpl, myeloproliferative leukemia virus oncogene) as active ingredient. The antibodies comprise human framework regions (FR) grafted to mouse complementarity region (CDR). Also included are remedies for thrombocytopenia containing antibodies (that can bind with human Mpl and monkey Mpl, remedies for thrombocytopenia containing antibodies (which have a cheavy-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of AEE02044-AEE02045, respectively, and/or a light-chain variable region with CDR1, CDR2 and CDR3 that have amino acid sequences of AEE02044-AEE02046, respectively, and sequences based on AEE02044-AEE02046, respectively, and sequences based on AEE02044-AEE02046, remedies for thrombocytopenia containing antibodies that can recognize amino acid sequences based on AEE02044-AEE02046, remedies for thrombocytopenia containing antibodies that can recognize amino acid sequences based on AEE02044-AEE02046, remedies for thrombocytopenia containing antibodies and agents for increasing platelets containing cremedies. The remedies are for the treatment of thrombocytopenia. Such antibodies are extremely effective because they have high agonistic activity against antihuman Mpl antibody, and the activity is comparable or superior to that of human TPO (thrombopoietin) which is a natural containing the part of the promper antibody and the activity against antihuman man antihuman antihum and the mouse antihum ant (or diabody) derived from the mouse anti-Mpl antibody (VB22B). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
